DETAILED ACTION

Examiner Notes

Examiner cites particular columns and line numbers in the references as applied to the claims below for the convenience of the applicant. Although the specified citations are representative of the teachings in the art and are applied to the specific limitations within the individual claim, other passages and figures may apply as well. It is respectfully requested that, in preparing responses, the applicant fully consider the references in entirety as potentially teaching all or part of the claimed invention, as well as the context of the passage as taught by the prior art or disclosed by the examiner.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-2 are rejected under 35 U.S.C. 102(e) as being anticipated by Metois et al., US 2003/0197878.

Re claim 1, Metois et al. discloses a method for determining a screen frequency and magnitude (i.e. scale) estimation of an image signal (see paragraph 54), the method comprising the operations of: (a) estimating in one or more channels each exhibiting different sensitivities for providing high quality frequency and magnitude estimation (see paragraphs 54-56; note that magnitude (i.e. scale) can also be estimated [0054]); (b) combining one or more frequency estimation from independent channels to create frequency magnitude estimation (see paragraph 56).

Re claim 2, Metois further discloses a channel exhibiting highest sensitivity (i.e. K channel) derives the frequency estimate (see paragraphs 54-56).

Re Claim 11, claim 11 recites identical features, as claim 1, except claim 11 is a system claim. Thus, arguments made for claim 1 are applicable for claim 11.

Re Claim 12, claim 12 recites identical features, as claim 2, except claim 12 is a system claim. Thus, arguments made for claim 2 are applicable for claim 12.

Re Claim 19, claim 19 recites identical features, as claims 11-12, and is rejected on the same grounds.

Allowable Subject Matter

Regarding claims 3-10, 13-18, and 20, are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The prior art of record does not disclose, teach, or suggest the claimed inventions of (in combination with all other limitations in the claims), detecting extrema in an image signal and a second filter out signal, and filtering the respective detected signals via cascades of averaging filters as set forth in claim 3. And operations of sub-sampling and dual interpolation as set forth in claim 7. Claims 4-6, and 8-10 are dependent upon claim 3 and 7 respectively and further limit the claimed invention. Claims 13-18, and 20 are apparatus claims and recite the same features as method claims 3-10.
